Percent Increase And Decrease Common Core Algebra 1 Homework Answers

Exercise #3: As water drains out of a pool, the depth of the water decreases at a constant percent rate of 20% per hour. The depth of the water, when the draining begins, is 12 feet.

(a) As in #1, find the depth, D, of the water in the pool after each of the following times, t. 8070 depth, D, of the water in the pool as a function of the time in hours it has been draining, t. t = 1 hr D = 12(1-.20) = 12(.80) = 9.6 ft

$$t = 2 \text{ hr} \qquad D = \{2 (1 - 20) = 12 (.80)^{2} = 7.68 \text{ f} + 12 \text{ hr}$$

$$t = 2 \text{ hr} \qquad D = 9.6 (.80) = 12 (.80)^{2} = 7.68 \text{ f} + 12 \text{ hr}$$

$$t = 3 \text{ hr} \qquad D = 7.68 (.80) = 12 (.80)^{3} = 6.144 \text{ f} + 12 \text{ hr}$$

D(t) = 12 (.80)
